

WHAT IS CLAIMED IS:

Sub B7

1. A method for providing an interactive program guide, the method comprising:
providing a plurality of transport streams;
providing a group of interactive guide pages within each said transport stream, where the group of interactive guide pages comprise related pages.

2. A method for providing an interactive program guide, the method comprising:
forming a first transport stream including video packets with a first set of packet identifiers; and
forming a second transport stream including video packets with a second set of packet identifiers,
where the first set of packet identifiers and the second set of packet identifiers include a common packet identifier.

3. A method for providing an interactive program guide, the method comprising:
providing an interactive guide page which may be navigated by a viewer;
providing a threshold within the interactive guide page; and
if the threshold is crossed during navigation of the page by the viewer, then requesting a next interactive guide page.
